“Bully” Freight Car Plug Door Opener Generation III

New Features:

- Longer Reach
- Narrow Width for Tight Work Environments
- Better Visibility for Lift Driver

Standard Bully Features You've Come to Expect:

- Designed to open plug doors without the danger of physical stress to the operator.
- Can be operated from the seat of a forklift or from behind a pallet jack.
- Is operated with 2 12-volt batteries which operate a hydraulic pump. The hydraulic pump in turn operates a small motor which turns the spindles that engage the door.
- The arms of the “Bully” are set at 8 rpm; opening the door in about 20 seconds, with adjustability for different needs or requirements.
- Since the power arm is self-adjusting, the forklift will not have to be moved as the door opens. If you are using a forklift, you can next use one of the extended side arms to push the door open.
